

NJORDAIR[®]

FAST TENT[™]

**CA-SERIES & SA-SERIES
MODULAR WORK TENT SYSTEM**

Keep Working In All Conditions

Fast Tent, from Njordair, is a range of heavy duty work tents, designed for rapid deployment in the toughest environments world-wide.

RAPIDLY DEPLOYABLE & RELOCATABLE AIR BEAM WORK TENTS

Fast Tents utilise an 'air beam' structure, tensioned with pressurised air. The result is a self erecting, portable inflatable building which protects workers and keeps projects on schedule in all conditions.

Advantages of Fast Tent

RAPID DEPLOYMENT

Unroll the tent, connect modules if required, attach the fans & ground anchors. Building will self-erect in minutes.

PORTABILITY

Easy to pack, store & move. For relocation, the air is allowed to escape, enabling packing into a small volume.

SIMPLE & MAINTENANCE FREE

Everything is pre-attached. No components to lose. Made from highly durable, industrial grade, UV resistant & flame retardant materials.

SAFETY

Fast Tent self erects from the ground. No working at height required.

MODULAR / FLEXIBLE DESIGN

Fast Tent can be used in a variety of configurations & lengths.

ON SITE TRAINING & SUPPORT

Supplied with everything you need right 'out of the box'. Our support & training team can help with the 1st set up.

NO FOUNDATIONS

Fast Tent does not require foundation or groundworks prior to deployment.

INSULATION

Deployed world-wide in every climate zone, proven successful in withstanding extreme heat, cold, snow & strong winds.

CUSTOM SHAPES, COLOURS & BRANDING

Choose from 18 colours & custom digital printing. Promote your company or brand on site.

How Fast Tent Works

Flexible Use

Use standalone...

...or remove walls...

...and join together.

Module Length

Standard Fast Tent length is 5m / 16ft.

Fast Tent is manufactured from a 630 gsm heavy duty, flame retardant and UV stabilised polyester reinforced, coated PVC fabric.

Modules are joined with Dutch lacing and rain flap to create shelters of any length.

Fast Tent Purchase Options

Standard design & orange / grey colour scheme with Njordair branding.

Typical lead time 7 days.

Custom design, colour or branding.

Typical lead time 8-12 weeks.

Wind

Properly anchored, tent can be used in wind up to 48mph (77 kph).

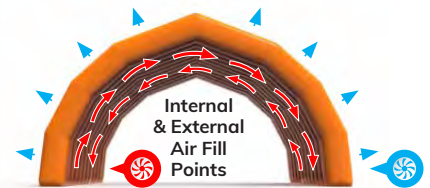

In gale force winds above 48mph, Fast Tent can be temporarily deflated.

Snow

The peaked roof design sheds snow & prevents accumulation.

If the tent is heated, circulating warm air prevents snow & ice accumulation (constant air only).

RUGGED & RAPIDLY DEPLOYED WORK TENTS

What's included?

Fast Tent is a 'Turnkey' system. Each 5m / 16ft long module is supplied ready to go. It can be used standalone or joined with other modules.

Why are our customers so happy?

"Ordering two tents from outside the country was a bit of a leap of faith, but that was a reflection of how desperate we were for a solution. After a year of use, the tents have performed flawlessly. We have not had to make any repairs, and the tents are robust enough to be in a construction environment without being damaged."

Austin Kateusz
General Manager
Mid-America
Pool Renovation, Inc.

"Everything went very well with our tent. We used it to cover exterior decks on a high-end condo project in Breckenridge, Colorado. This project is situated at 10,000 feet above sea level, so weather was a big factor. Tent allowed us to continue waterproofing operations (among other activities) and not be impacted by snowfall or cold weather."

Ryan Odell
Construction Manager
PCL Construction
Services, Inc.

"I ordered Tents a few years ago. They are amazing to extend our season into the winter and be able to work year round. I had an issue recently with the tents and the company was incredible about getting them repaired. They flew someone over from Europe to their facility in the USA and got them looked after for us efficiently."

Earl Spinks
President & CEO
Impressions Group
Ottawa, Inc.
